

Package: dataset.json.examples (via r-universe)

October 25, 2024

Title Dataset-JSON Example Files

Version 0.0.1

Description An R data package providing a set of Dataset-JSON files comprising SDTM and ADaM datasets. Examples are originally from: <<https://github.com/cdisc-org/DataExchange-DatasetJson>>.

Contents

example_path	2
unxz	2
Index	4

example_path	<i>Dataset-JSON example file path</i>
--------------	---------------------------------------

Description

`example_path()` retrieves the local path to the bundled Dataset-JSON example files. These files are compressed with xz.

Usage

```
example_path(name = NULL)
```

Arguments

name	The name of Dataset-JSON example. Run <code>example_path()</code> to check available options, e.g. <code>example_path("ae")</code> .
------	--

Value

A character vector of absolute paths to Dataset-JSON example files.

Examples

```
example_path("ae")  
example_path("ads1")
```

unxz	<i>Uncompress xz</i>
------	----------------------

Description

`unxz()` decompresses a xz file into a new file.

Usage

```
unxz(from, to)
```

Arguments

from	A path to a xz file.
to	A path to a new file (uncompressed).

Value

This function is ran for its side effect of creating a new file and returns its path, i.e. `to`.

Examples

```
newfile <- file.path(tempdir(), "ae.json")  
unxz(from = example_path("ae"), to = newfile)
```
